

Week 7 Report

Group Members:

Tommy Ahn, Chang Hi Lee, Luke Belusko

Our main focus this week was to get together and discuss about our first individual presentation. We have decided to divide up the workload by assigning different roles in the presentation. Chang Hi was given the role as a presenter, Luke and Tommy was given the role of background research and presentation slide preparation. Our presentation took place on Monday and we are confident that Chang Hi delivered a great presentation. We look forward to receiving feedback on the presentation and also on the preliminary report when we return from Fall break.

We have sent the preliminary report to Dr. Thomson and asked for his feedback as well. In the same email, we have asked him if we could be present in the operating room of surgery to have a better idea of how current thoracic outlet syndrome surgeries take place. We have not heard back from him yet this week but hope we could hear back from him by next week.

During Fall break, we have decided to meet at least once to discuss about our next step in the design process. We hope to gain some insight on the general design and have a draft of CAD file ready to be 3D printed by the following week.
