Week 9 Report

This week was primarily focused on two tasks, setting up a meeting with Dr. Thompson to discuss our preliminary report, and the creating and implementation of our website. The website was successfully created and has the sections we believe are needed to move forward in the future. We also began uploading all our weekly reports to the site in the form of a PDF. As we come to more conclusions and find the solution to our problem, the site will be fleshed out further.

On the front of meeting with Dr. Thompson, we were able to get an email this week, and set up a meeting for Nov 1. During this meeting, we will be discussing our preliminary report, as well as setting up a chance to observe the OR in order to clarify the needs in a more concrete manner.

On one last not, the group has determined that the level of recording in the labarchive notebook has been insufficient so far, and we have made plans to remedy the situation, as well as ensure consistent and accurate recording in the future.
